America's Oldest Seed House

BRISTOL, PA.

LANDRETHS' CERTIFIED TOMATO SEED

We wish to call your attention to our Certified Tomato Seed grown by us, under the supervision of and officially inspected by the Pennsylvania Department of Agriculture. We sell our tomato seed only in $\frac{1}{4}$, $\frac{1}{2}$ and 1 lb. cardboard sealed lithographed packages, wrapped in Moistureproof Cellophane, each package of which is sealed by a certificate from the Pennsylvania Department of Agriculture, stating that the tomato seed contained in that package was inspected and passed by the Department of Agriculture. We guarantee this seed to be from the fields which were inspected and passed by the representatives of the Department of Agriculture for trueness of type, vigor of plants, and freedom from disease.

Our Certified Tomato Seed has also passed the high germination requirements of the Pennsylvania Department of Agriculture. Our supply of course is not unlimited, but we offer until sold out, Crown Picked Certified and Certified Seed. See pages 67 to 72 in our Catalogue for further particulars.

CROWN PICKED CERTIFIED TOMATO SEED

The demand for Crown Picked Tomato Seed has been so great that we have previously been unable to fill the orders for it. We now have Crown Picked Seed of all the certified tomato varieties listed. For Crown Picked Seed only the first or crown clusters of fruits are used. Some growers claim that crown picked seed is plumper and therefore produces earlier fruits the following year than the seed from later pickings. Separate descriptions of the crown picked certified tomato varieties are not necessary since those describing the certified stocks will suffice for both.

LANDRETHS' CROWN PICKED CERTIFIED MARGLOBE TOMATO

FOR DESCRIPTIONS SEE OUR RETAIL CATALOGUE SENT WITH THIS PRICE LIST

If you do not see what you wish, write us. If it is a standard variety, no doubt we have it; perhaps we may have it even if it is not a well-known sort.

We grew at Bristol this past season 1936 Crop all the following varieties of tomato seed, the prices named being special to Cannerys.

All prices are per pound. Where prices are quoted for different quantities, the quantity classifications shown are for quantities up to but not including the high quantity listed.

Prices for quantities in excess of high quantity listed will be quoted on application.

If seed is treated we charge 10 cents per pound over these prices.

Landreth's Stringless Green Pod

Green-Podded Bush

Prices on Application

GIANT STRINGLESS.—Color of seed, yellow. Long, cylindrical pods entirely stringless. Height of vine, 13 to 15 inches. Foliage resembles Full Measure. Not so early by 2 or 3 days as the older Stringless. Pods similar to Stringless but slightly longer and straighter. A more showy pod, about 6 inches long, containing 6 to 7 beans to pod. 8½c per lb.

REFUGEE STRINGLESS (ROGER'S).—This Bean is vastly superior to the old Refugee or 1000 to 1. It has all its good qualities and in addition is absolutely stringless at all stages of growth. Is practically identical in habits of growth to the 1000 to 1, except the leaves may be slightly more pointed and the foliage a trifle more yellow, six or seven days earlier. A valuable introduction. 8c per lb.

NEW STRINGLESS OR TENDERGREEN.—Color of seed resembles Refugee Stringless. Height of vine, 17 inches, not quite as dark foliage as Landreth's Stringless. Pods 6 inches long, round, almost straight, meaty. 5 or 6 beans in a pod. Not as productive as Landreth's Stringless. Resembles Full Measure, but hardier and more dependable. Will undoubtedly take the place of Full Measure with Market Gardeners and Cannerymen.

LANDRETH'S STRINGLESS GREEN POD—This bean is from an individual plant Trial Ground selection from the Burpee's Stringless Green Pod. We made a new selection eleven years ago from one individual plant and have propagated it ever since, so that our stock is the product of this plant. The color of the seed is brown, kidney shaped; vine is more erect with a darker foliage and a longer slimmer pod than the old type of Burpee's Stringless; pods and vines stay green longer than the original type; pods six to eight inches long do not turn yellow, slightly curved, meaty, absolutely stringless and free from fibers. This is undoubtedly the best round podded bean in the market today for home garden, market gardeners, or canners. It is much superior to the Giant Stringless. The vine is 17 to 18 inches high with 7 or 8 beans in a pod. Will produce 10% to 15% more pods in weight than any other bean. We cannot recommend Landreth's Stringless Green Pod too highly. In sections where we have grown this bean it has produced an average of five bushels to the acre more dry beans than any other. We can say justly it is the best, most disease resistant and most productive bean in existence today. 10c per lb.

LOWE'S CHAMPION.—Color of seed, crimson, almost round; pods flat, green, stringless, broad almost straight; vine, 11 to 12 inches.

BEANS

Golden Wax Pods

REFUGEE STRINGLESS WAX.—A variety not excelled in every good quality. Pods round, crisp, curved, meaty, bone-white, productive. A sort hard to beat. Stringless. 10c per lb.

ROUND PODDED KIDNEY WAX OR BRITTLE WAX—An improvement on Wardwell's Flat Pod; quite as early, as long and as productive, while more showy and decidedly more luscious because more meaty. The pods are round, full of meat, entirely stringless and very brittle; the color lemon-yellow; the seeds are large and white with purplish eyes when dry. Height 12 inches.

WARDWELL'S KIDNEY WAX.—A long, half-flat golden pod. A very productive sort. Dry seeds, kidney formed, color white with dashes of light purple about a white eye.

NEW KIDNEY WAX.—This new introduction is, we believe, one of the best made in recent years, because, while the seed resembles Round Pod Kidney Wax, they are white in color, with a very slight dark eye, making them desirable for canning. The semi-round straight stringless pods are 6 to 7 inches long, very broad and of good thickness. The vine is hardy and very productive.

Henderson's

Bush or Dwarf Limas

DWARF LIMA, HENDERSON'S.—This bean, in three distinct colors, was introduced by us in 1885 before it was given the above name. We called it Dwarf Carolina. Height 1 foot, compact; leaves small, exceedingly dark green; very productive and early.

Landreths' Best Beet

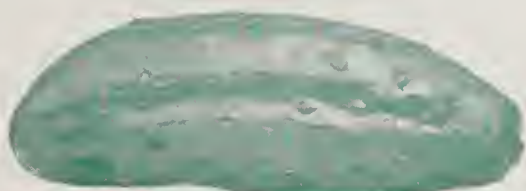

BEET

Prices on Application

LANDRETHS' BEST.—The same date of maturity as Detroit. In shape and color very attractive; superior to Detroit. Root varying from oval to round, developing unusually early to the perfect form, and mouse-tailed. Flesh solid, deep dark red, but no rings, of excellent quality and sugary. Skin smooth and free from side fibres. In the Landreths' Best we have what has long been looked for—an early oval-shaped root of intensely red color. These qualities have long been demanded by those looking for something superior. Landreths' Best Beet will be found of great superiority by the Beet canning operator when the size is that of a silver dollar. At that early stage they are just perfect in every requirement, and for factory purposes they can be used to the greatest advantage when of that size. Try this variety and you will buy it the following year. **75c per lb.**

DETROIT.—Oval in form, flesh dark red, skin smooth, leaves small, erect. Excellent sort. Fine for canning. Before the introduction of the Landreth Best Beet the Detroit was the leading variety, but the Detroit now takes second place. A standard variety, not requiring a description to any experienced canner. **35c per lb.**

CROSBY'S IMPROVED EGYPTIAN. A choice form of the Egyptian and consequently very desirable. Rounder in body than the Egyptian, almost as early and in leading demand for early processing at the canning factory. **35c per lb.**

Snow's Prolific Pickle

CUCUMBER

Prices on Application

SNOW'S PROLIFIC PICKLE.—In appearance of fruit a variation of the "Chicago Pickle," but considerably longer in vine than the "Short Prolific," which was given its name because of its exceedingly

short vine. The fruit of the "Snow's Prolific," is more uniformly even in diameter from end to end, small, early, dark green, and both ends blunt. The "Snow's Prolific" has a reputation of being more productive than any of its class. It also has a smaller v-shaped cavity in the centre than other strains of Pickle and therefore is not so spongy and in every way suitable for bottling, consequently, used to a very large extent by the best pickling houses. It is really a famous variety. **40c per lb.**

SHORT PROLIFIC OR GREEN PROLIFIC PICKLE.—An all-green variety with black spines producing a small fruit suitable for pickling in 50 days after the sprouting of the seed. An abundant bearer highly recommended for Pickles for which it is used by many of the most famous pickling establishments. The vines are very short, seldom running over 30 inches from root—hence its name; admitting of planting in rows as close as three feet. In seeding this variety, do not drop the seed in hills, but sow in drills in continuous rows as in the case of Peas. Drill in about one seed to the inch, and when the plants are well established cut them out to three inches apart. **40c per lb.**

CHICAGO PICKLING AND BOSTON PICKLING are almost synonymous. The vines grow to a length of five feet from the hill; the fruit is longer than the Jersey Pickle, but does not hold its color so well. **40c per lb.**

JERSEY PICKLE.—An all-green, black-spine variety, used very extensively by those who prepare pickles commercially. It is productive and said "to green" better than any other variety and "to hold its color" better than any other variety. Vigorous crops will develop fruit of pickling size, 2 to 3 inches long, in 60 days. **40c per lb.**

CARROT

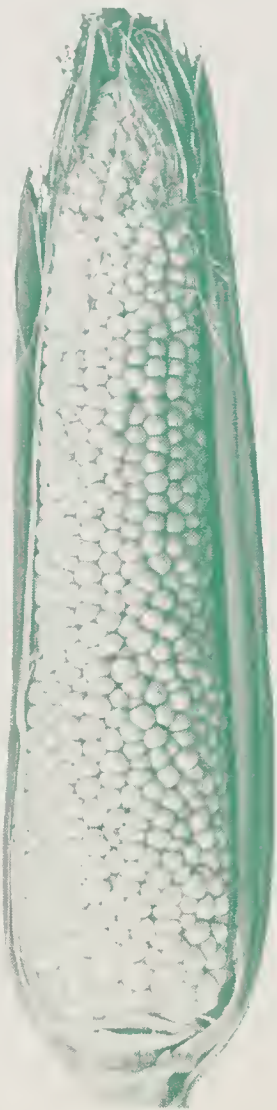

Prices on Application

CHANTENAY HALF-LONG SCARLET OR MODEL. Roots about 5 to 6 inches in length, 2 to 2½ inches thick at the crown. Small top set in a slight depression. Color deep orange red. A fine medium early, half long, stump rooted Carrot, free from core. One of the best for canners. **40c per lb.**

CHANTENAY RED CORED.—An improvement on the Chantenay, its core being indistinct. Roots 5 to 6 inches long, 2½ inches in thickness at shoulder, flesh reddish orange, tender, delicate flavor. **40c per lb.**

Chantenay Carrot

Country Gentleman

SUGAR CORN—Shelled

Prices on Application

SPECIALLY SELECTED STOCKS

HYBRIDS AND TOP CROSSES ARE HIGHLY RESISTANT TO STEWART'S WILT DISEASE

BLOOMSDALE GOLDEN (GOLDEN SUNRISE).—Grains medium length and golden in color. Height of stalk $6\frac{1}{2}$ to 7 feet, ears long, mostly 10 to 14 rows, thin, average length 8 or 9 inches long, pointed. This is a new hybrid variety created by crossing Golden Bantam with Long Island Beauty, in 1925, by our Mr. Mills. Due to the confusion of our Golden Sunrise with Golden Sunshine and others of similar names, we have changed the name of Golden Sunrise to Bloomsdale Golden. The yield is only slightly less than Golden Cross Bantam, the ears are larger and thicker. **11c per lb.**

BLOOMCROSS P39 or BLOOMSDALE GOLDEN TOP CROSS. Known as Sun Cross, P. 39, in New England States. This is identical to Bloomsdale Golden except that one of the parents of Purdue Golden Cross Bantam is used as the pollen parent on the detasseled rows of Bloomsdale Golden. This makes a superior hybrid, very uniform and producing a high yield per acre. Resistant to Stewart's Wilt Disease. **25c per lb.**

COUNTRY GENTLEMAN or SHOE PEG.—Grains long and irregular, very narrow and white color. Stalks $5\frac{1}{2}$ to 6 ft. Ears medium length and thickness, averaging 6 to 7 inches, irregular rows. Considered by many one of the best sweet corns for family garden and one of the most popular varieties used by commercial canners. The silk on Country Gentleman ears is always very red, and it can easily be distinguished by this feature. Fairly resistant to Stewart's Wilt Disease.

COUNTRY GENTLEMAN INBRED HYBRID.—This is identical in description to ordinary open pollinated Country Gentleman, but is superior in uniformity and high in yield. It is especially adapted to canners and market gardeners.

EVERGREEN, STOWELL'S.—Grains long and white in color. Height of stalk about 7 to 8 ft. Ears medium length and thick. Average 6 to 7 inches long and short pointed. Rows mostly 12 to 16. This is the standard variety of sweet corn, more of this variety being sold than any other. It is very popular for home, market gardeners and canners. Very productive. Fairly resistant to Stewart's Wilt Disease. **12c per lb.**

EVERGREEN GOLDEN or BANTAM. Grains medium long and golden in color. Ears, medium length and thick, average 7 to 8 in. long. Rows mostly 10 to 14. Height of stalk $6\frac{1}{2}$ to 7 ft. It is a cross between Golden Bantam and Stowell's Evergreen. A good canner's variety fairly resistant to Stewart's Wilt Disease. **10c per lb.**

GOLDEN BANTAM.—Grains medium length and golden in color. Height of stalk 5 to $5\frac{1}{2}$ ft. Ears medium length and thin, average 6 to 7 inches long and short pointed. Rows mostly 8 or 10. This is the standard sweet corn for quality and is grown by gardeners and canners. Very popular everywhere. Where Stewart's Wilt Disease is present, Golden Bantam should not be used. We have other varieties resistant to this disease. **10c per lb.**

BANCROSS P39 or GOLDEN BANTAM TOP CROSS. Grains medium length and golden in color. Height of stalk about $5\frac{1}{2}$ to 6 ft. Ears medium length and medium thickness, averaging about 7 to $7\frac{1}{2}$ inches and short pointed. Rows 8 to 12. This is more resistant and more uniform than ordinary Golden Bantam, and produces a larger yield per acre. **30c per lb.**

GOLDEN CROSS BANTAM.—Grains medium length and golden in color. A well-known inbred hybrid produced by crossing Purdue Bantam No. 39 with Purdue No. 51. Height of stalks $5\frac{1}{2}$ to 6 ft. Ears medium length and thickness, average length 7 to 8 inches, short pointed. Rows mostly 10 to 12. An excellent hybrid in uniformity, quality, high yield and resistant to Stewart's Wilt Disease. There are many inferior stocks of this variety on the market, some at cheaper prices. Poor germination, low yield and dissatisfaction may result by buying cheap seed.

GOLDEN SUNSHINE. Grains medium length and golden yellow in color. This is a good variety, earlier than Golden Bantam. Height of stalk $4\frac{1}{2}$ to 5 ft. Ears short and medium in thickness, average 5 to 6 inches and short pointed. Rows mostly 10 and 12. Very susceptible to Stewart's Wilt Disease and therefore cannot be grown successfully where this disease is prevalent. Since Golden Sunshine is earlier than Golden Bantam, many growers use it for a first early. The quality is good. **10c per lb.**

SPANCROSS P39 or SPANISH GOLD TOP CROSS.—Grains medium length and golden yellow in color. The height of stalk is about the same as Golden Cross and the ears about the same length, 7 to 8 inches. There are usually 12 rows of golden yellow kernels of fine quality. It is about five days later than open-pollinated Spanish Gold, but is more wilt resistant and, therefore produces a higher yield than Spanish Gold. This is an early, wilt resistant golden sweet corn of good quality. It is about ten days earlier than Golden Cross. **20c per lb.**

WHIPCROSS P39 or WHIPPLE'S YELLOW TOP CROSS. Grains medium in length and golden yellow in color. The height of stalk is about the same as Whipple's Yellow, as well as the length and thickness of the ear and the number of rows of kernels. It is somewhat resistant to wilt and therefore produces a greater yield than Whipple's Yellow. It is uniform in maturing, the crop is of good quality, better than open-pollinated Whipple's Yellow. This variety is about 5 days earlier than Golden Cross. **20c per lb.**

All Head

CABBAGE

Prices on Application

THESE ARE VALUABLE FOR KRAUT

COPENHAGEN MARKET.—A hard, round head, in maturity following the Charleston Wakefield. Being larger, it produces a greater tonnage per acre and is very profitable. Heads very uniform in size, round, very hard and of long keeping qualities. The plants are very vigorous, short stems, few outer leaves. This variety is gaining in popularity every day. **\$1.25 per lb.**

DANISH ROUND HEAD, SHORT STEM. This variety is considered by many superior to the tall stemmed ballhead, having a shorter stem, and a little earlier. It is the more popular now of the two varieties. It produces a very solid, good quality, medium size round head and is very popular with the market gardeners in Cabbage growing districts of northern latitudes. The stock offered here is very hard to equal. **\$1.00 per lb.**

CABBAGE—Continued

WISCONSIN ALL SEASONS.—A yellows resistant strain of All Seasons. Valuable in sections which are infested with cabbage yellows or wilt. Coarser plants than the original All Seasons. A good Winter keeper, producing large, flat, deep hard heads. Productive; used extensively in the manufacture of kraut, as well as for home gardens.

\$3.00 per lb.

WISCONSIN HOLLANDER No. 8.—A late, yellows resistant Danish Round Head, developed by Prof. L. R. Jones, producing larger plants than the famous Danish Round Head. Heads are inclined to flatten slightly as they mature.

\$3.25 per lb.

SUREHEAD.—A popular strain of the favorite Flat Dutch type of Cabbage so largely grown for Winter use. The heads are large, round flattened at the top, remarkably uniform, extra hard, firm and fine in texture. An excellent sort and well named. Suitable for the kraut factory.

\$1.00 per lb.

ALL HEAD.—Early, large, flat, solid-headed, very early for its size, few outside leaves, consequently can be planted closer together than other large Cabbages. A very reliable sort and well named. One of the very superior Cabbages.

\$1.00 per lb.

ENKHUIZEN GLORY.—Short stemmed, half round, early for its size, attractive large white heads. In great demand. A most excellent stand-by. Any producer can put his confidence in the Enkhuizen as a good header and a most valuable Cabbage. Quite similar to All Head.

90c per lb.

MARION MARKET or NEW RESISTANT WISCONSIN COPENHAGEN.—This is a yellows resistant strain of Copenhagen Market. Plants large, coarse, not so uniform or early by ten days as the original Copenhagen, but have solid, crisp, tender, round heads. Will produce a crop when non-resistant strains fail.

PENN STATE DANISH BALL HEAD.—A late variety developed by Prof. C. E. Myers, of Pennsylvania State College. Productive, late, uniform, attractive, hard heads, six to seven inches deep, an excellent, large yielding Winter variety, resembling Danish Ball Head but heads slightly more flattened.

\$3.00 per lb.

Alaska

PEAS

Prices on Application

ALASKA ALCROSS STRAIN.—Practically the same as Alaska except it is resistant to Fusarium wilt. Pods single, blunt, light green, containing 6 to 7 Peas, similar to Alaska. Bred particularly for canners' use, with whom they are growing more popular each year.

ALASKA OR EARLIEST OF ALL.—A green seeded extra early, vine 30 to 36 inches tall. Distinct light green foliage, pods 2 to 3 inches long, containing 5 to 8 blue-green, small, slightly pitted to smooth seeds. One of the best extra early Peas in the market, and a great favorite with canners, because a good stock of this variety matures all its pods at once.

McLEAN'S ADVANCER.—A green, wrinkled variety. Height of vine about 33 to 38 inches. Upright, very vigorous in growth, and very popular with market gardeners and commercial canners. Pods about 3 inches long, containing 5 to 6 good flavored Peas. 5½c per lb.

HORSFORD'S MARKET GARDEN.—Height of vine about 30 to 36 inches. Pods medium size, about 2¾ inches long, containing 6 to 7 dark green Peas. Small leaves with very dark green foliage. Very large producer of showy pods, producing pairs in great abundance.

5½c per lb.

PERFECTION.—A green, wrinkled variety. Height of vine about 35 to 40 inches, grows erect and is a strong grower. Very popular with commercial canners. Pods double, about 3 inches long, blunt, borne at the top of the vine, containing 5 to 8 good flavored Peas. 5½c per lb.

SURPRISE.—One of the earliest of the wrinkled sorts. Vines over two feet tall and producing an enormous crop of uniform small seeds. This variety is really a wrinkled Extra Early, pods light color, blunt, about 3 inches long.

6c per lb.

ADMIRAL, GREEN SEED.—Color of dry seed is deep green. Especially desirable for canners, as it retains its green color under all conditions. Height of vine, 36 to 40 inches; pods blunt, straight, single, contain 6 to 8 peas.

5½c per lb.

Landreth's Cheese Pumpkin

PUMPKIN

Prices on Application

LANDRETHS' CHEESE.—An excellent canning variety. Shape flat like a cheese box. Outside color orange, no stripes, a fine keeper. Often 15 inches across the top and 6 to 7 inches thick, top and bottom indented. We can say without hesitancy there is no stock in the market equal to the Cheese Pumpkin we are offering. Don't confuse this stock with Kentucky Field offered by many houses as Cheese.

60c per lb.

YELLOW CASHAW.—Our stock of this cannot be excelled by any. It is a mammoth Pumpkin, frequently weighing 30 to 40 pounds with a very large full meaty curved neck, the flesh of which is fine for Pies. Outside color very rich orange yellow. No stripes of any kind. Crook-neck often bends back so as to touch the bowl.

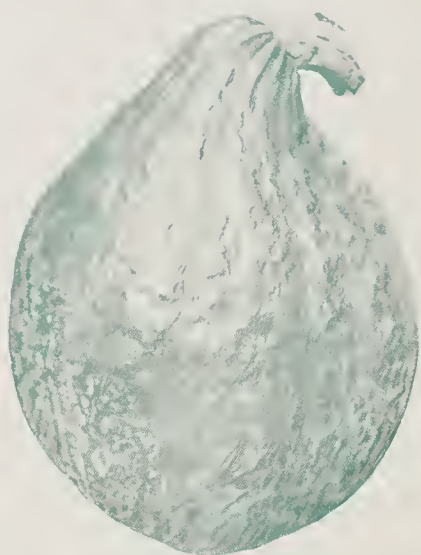

60c per lb.

KENTUCKY FIELD.—This Pumpkin is so well known as a Canning Pumpkin, it is hardly necessary describing. The fruit vary in size and shape, some being flat like cheese, others like Watermelon. The color is light golden cream.

18c per lb.

CONNECTICUT OR COMMON FIELD.—A large red, slightly oval fruit. Very productive. Used for canning

25c per lb.

Boston Marrow

SQUASH

Prices on Application

BOSTON MARROW.—A meaty or thick rind, very productive Squash, suitable to produce a large tonnage for the factory. Fruit keeps many weeks after the vines have been killed by frost. Color of skin bright orange shading to lighter color of flesh, deep orange. A fine Squash for pies and Winter use.

25c per lb.

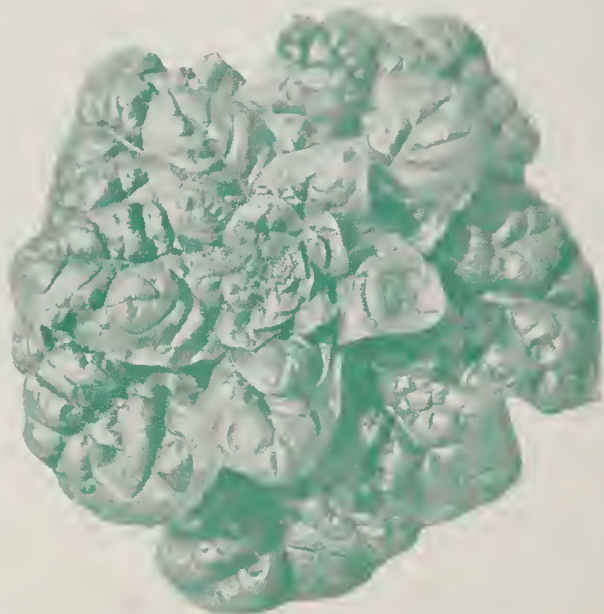

SPINACH

Prices on Application

BLOOMSDALE RESELECTED DARK GREEN. Sometimes called Norfolk Savoy. The Landreths introduced and named this general type in 1826. Since then it has become a standard and now appears in nearly all catalogs in the United States and is equally well known in Europe. No Spinach is so well known as this variety and we are perfectly safe in saying that five times as much of this is sold and planted in the United States, as any other variety. As an Autumn sort it is superior to all others, but in Spring it is inclined to shoot early. The leaves are twisted, bloated or savoyed, and a glossy dark green, giving them an elasticity adapting them for transportation over long distances and at the same time giving the crop large measuring qualities. Edible in 40 to 55 days from planting. This Seed may be sown in the

Autumn or as early in the Spring as the condition of the ground will permit. We advise by all means to plant in the Autumn the Bloomsdale Reselected Dark Green Spinach, as it is by far the best of all the Autumn varieties. It is, however, not as good for Spring planting as Bloomsdale Long Standing, Juliana, or Nobel, because it shoots early to seed. Spinach, when planted south of New York City, stands out all Winter and during the various open spells throughout the Winter can be cut and sent to market as a green vegetable; very valuable in this respect.

11c per lb.

Bloomsdale Reselected Spinach

BLOOMSDALE LONG STANDING. Remains about ten days longer in table condition than the main crop, Bloomsdale Reselected, and is about 5 days later. Remarkable in the total absence of male plants. This selection possesses all the good qualities of the famous Bloomsdale Reselected, from which it is a plant selection made in Holland, the habit of remaining longer in shipping condition after Bloomsdale shoots to seed, which marks it as a very valuable type. Sow it and be convinced that it has unusual merit.

12c per lb.

GIANT NOBEL or GAUDRY.—An erect, strong growing, long standing sort of the Flanders type. Leaves unusually broad, firm, and thick. Arrow shaped with a rounded top. Light green to yellowish green in color, smooth, and the largest of any Spinach. The most desirable of all the Long Standing types for those who do not favor a savoy leaf. Slow to shoot to seed, a most decided acquisition.

11c per lb.

Pile of Boston Marrow Squash for Seeds Crop 1936 on Landreths' Bloomsdale Seed Farm.
